

Don't Wing It

Read what you can do to help:

#1

Discourage others from feeding pigeons if you see them doing so.

Explain that:

- ✎ Pigeons carry diseases that can be contracted by humans, especially those with lower immunity.
- ✎ Pigeons' droppings dirty the environment.
- ✎ Feeding pigeons is an offence (fine up to \$10,000). Leftover food may attract other pests.
- ✎ Throwing food from windows in flats to feed pigeons is considered a high-rise littering offence.

#2

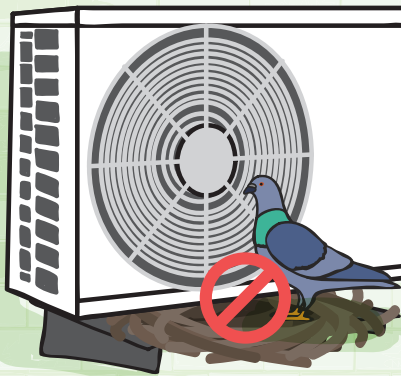

Return your trays at food centres and dispose of food scraps properly.

Pigeons will eat the leftover food at the tables and congregate, dirtying the environment.

#3

Check your air-con ledge regularly for nests.

If you see a nest, engage a bird control contractor to remove the nest, clean the ledge and bird-proof it.

#4

Prevent roosting and nesting by installing spikes or other bird-proofing measures.
